Full Environmental Assessment Form Part 1 - Project and Setting

Instructions for Completing Part 1

Part 1 is to be completed by the applicant or project sponsor. Responses become part of the application for approval or funding, are subject to public review, and may be subject to further verification.

Complete Part 1 based on information currently available. If additional research or investigation would be needed to fully respond to any item, please answer as thoroughly as possible based on current information; indicate whether missing information does not exist, or is not reasonably available to the sponsor; and, when possible, generally describe work or studies which would be necessary to update or fully develop that information.

Applicants/sponsors must complete all items in Sections A & B. In Sections C, D & E, most items contain an initial question that must be answered either "Yes" or "No". If the answer to the initial question is "Yes", complete the sub-questions that follow. If the answer to the initial question is "No", proceed to the next question. Section F allows the project sponsor to identify and attach any additional information. Section G requires the name and signature of the applicant or project sponsor to verify that the information contained in Part 1 is accurate and complete.

A. Project and Applicant/Sponsor Information.

Consolidated Edison Company of New York, Inc. (Con Edison) is proposing the Nitrogen Refrigeration Cycle (NRC) Replacement Project (the "proposed project") to replace the liquefied natural gas (LNG) nitrogen loop system at its approximately 25-acre LNG facility in Astoria, Queens, New York City ("project site"), to ensure reliability for Con Edison's customers during the cold winter season and unplanned interruptions on the gas system. The proposed project entails the in-kind replacement of the existing 82 MM Btu/hr gas turbine used for natural gas liquefaction, with a new, more efficient Siemens 54 MM Btu/hr gas turbine that will substantially reduce the facility's air emissions. Con Edison is seeking a modification to its Title V Permit for the Con Edison Astoria Facility to facilitate the proposed project. The proposed modification to the Title V Permit would restrict usage of the proposed turbine to 4,380 hours of operation per year. The existing combustion turbine, which has been in operation since 1974, is located in an approximately 3,300 square foot building near the facility's LNG storage tank. The replacement turbine would be installed in a new approximately 6,500 sf building on the same site that is being constructed independent from the proposed project to contain other LNG plant equipment. The proposed turbine would be served by utility lines that are also under construction to connect the new building independent from the proposed project.
